CUSTOM & HERITAGE

ÖHLINS FG 631

The Öhlins FG 631 is a 43 mm conventional front fork with universal fitment, ideal for bike builders looking to upgrade the suspension of their custom machines. Featuring gold-colored inner tubes and black outer tubes, the fork combines premium performance with a classic, refined appearance.

The fork internals feature our proven NIX technology, which isolates compression damping in the left fork leg and rebound damping in the right fork leg. This configuration promotes the buildup of positive pressure, resulting in more stable damping characteristics. Independent damping circuits also allow for more precise adjustment. Riders can easily adjust compression, rebound, and preload separately through the top caps.

The FG 631 front fork offers stable and reliable damping characteristics while improving bump absorption, providing a smoother, more comfortable ride quality. Unlike our model-specific forks, the fork bottoms are supplied without brake caliper and fender mounts, making them easy for custom builders to adapt to a wide range of motorcycle models.

FEATURES FG 631

- NIX technology
- Stroke 130 mm, length 800 mm
- Triple clamp diameter 43 mm
- Wheel axle 32 mm
- Spring rate 9.5 N/mm
- Range of optional spring rates available
- Fully adjustable
- Settings can be changed through our service centers
