Note!

Please note that there can be small differences between your product and the images in these instructions.

Note!

Please note that during storage and transport, especially at high ambient temperature, some of the oil and grease used for assembly may leak and stain the packaging. This will not cause damage to the product, wipe off the excessive oil or grease with a cloth.

Note!

Before you install this product, check the kit contents. If anything is missing, please contact an Öhlins dealer.

⚠ Warning!

Before you install this product, read the Öhlins Owner's manual. This product is an important part of the vehicle and the vehicle stability.

Steering damper for Ducati Panigale, Panigale V4

SD20 068

Mounting Instructions

ÖHLINS

MOUNTING INSTRUCTIONS

⚠ Warning!

We strongly recommend to let an Öhlins dealer install this product.

⚠ Warning!

If you work with a lifted vehicle, make sure that it is safely supported to prevent it from tipping over.

👁 Note!

When you work with this product, see the vehicle service manual for vehicle specific procedures and important data.

👁 Note!

Before you install this product clean the vehicle.

1

Remove the original steering damper according to the vehicle service manual.

2

Install the Öhlins steering damper in the original brackets.
Use the screw (05404-07), sleeve (02239-04) and spacer (02238-12) for the end eye bracket on the handle bar.
Use the original screw, sleeve (02239-04) and the teflon spacer (02259-01) for the frame bracket. Install the teflon spacer between the Öhlins bracket and the sleeve. See figure.

3

Fasten the brake fluid container hose with the tie-rap provided in the kit according to the figure. The hose must not rub against anything between the brake fluid container and the master cylinder since this can cause wear on the hose when the steering damper moves.

✋ Caution!

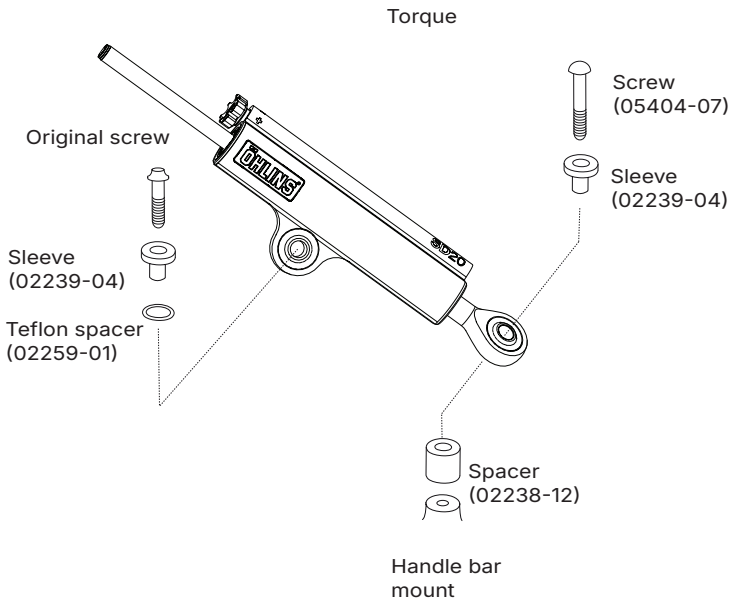

Make sure that there is no clearance problem when you turn to the left and right end positions. Make sure that the steering damper is not used as a stop.

✋ Caution!

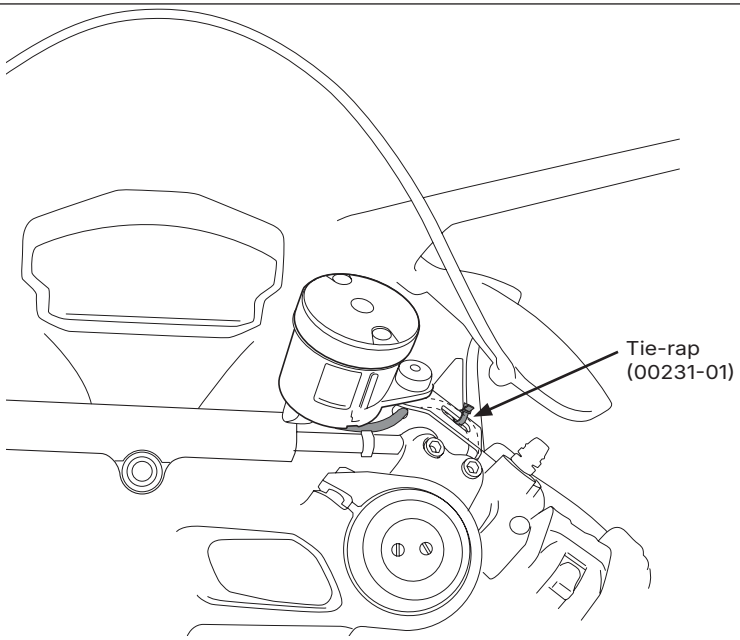

Make sure that you tighten all screws to the correct torque and that nothing fouls or restricts movement of the shock absorber/front fork/steering damper when the suspension is fully compressed or extended.
