ADVENTURE

# ÖHLINS NIX 30 ADVENTURE

**Better Damping Performance**

New compression and rebound settings—made possible by rebalancing how damping force is distributed internally—deliver more grip, comfort, and predictability for off-road riding.

**Improved Spring Characteristics**

Reduced spring preload means better grip and a smoother feel when you're riding with a light touch on the front wheel. This is a gamechanger when powering out of rough or gravelly corners, and a major advantage any time you're pushing through uneven, technical terrain.

**Springs for Every Rider**

The kit now comes with springs to suit a wide range of rider weights—from 60 to 130 kg—making it easy to achieve your perfect setup straight out of the box.

**FEATURES NIX 30 ADVENTURE**

- NIX technology
- Updated damping settings (compression & rebound)
- Optimized damping force distribution
- Improved grip, comfort and predictability off-road
- Reduced spring preload
- Springs included in the kit
- Covers rider weights approx. 60–130 kg
- Improved performance with light front wheel
